

Help Build Simmy-TREE page 1

Chipo wants to soar with the elder moths in the Simmy-Tree. Her mopani tree is usually covered with leaves that have two parts, the same shape and size (just like the wings of a moth). The leaves of Simmy-Tree do not have symmetry. The leaves are not the same shape and size.

On the next page, first find the pair of wings that are the same shape and size (they have symmetry) so that Chipo can soar with the elders. Cut out the new wings for Chipo the moth. Then find the pairs of leaves that will help Simmy-Tree look more like Chipo's mopani tree from South Africa. Cut them out and add them to Simmy-Tree.
